ACKNOWLEDGEMENT

➢ We wish to convey our sincere gratitude to the staff of SHREE G.K. & C.K. BOSAMIA college for giving us s a chance to obtain project.

➢ We are very much thankful to our project guide Prof. ASTHA RAVAL. Our project cannot be completed within the time without his guidance.

➢ As last,our special thanks to them those who have encourage and motivate us directly or indirectly in our project.

Your faithfully,

Meet Dobariya
Divyesh Bakhlakhiya

PREFACE

- ➤ We are the students of BCA from SHREE GK & CK BOSAMIA COLLEGE ARTS & COMMERCE COLLEAGE. Our project title is "HORIZON LOGISTICS".

- ➤ This is Project Report on Horizon Logistics web application that provide shipping services that is presented to you as a subject in 5th semester in BCA.

- ➤ The successfully completion of our project was experience which we got by doing this project was essential to our future. The information in the project being submitted by us contains detailed analysis of research held by us.

- ➤ This project is developed in PHP, HTML, CSS & JS with using MySQL as a backend.

INDEX

INTRODUCTION

- ➢ **The Horizon Logistics project Aimed to provide logistics services to the customers.**

- ➢ **The project provide you User management, Order management, Payment management & order tracking.it provide facilities such as feedbacks, order standards, special care for important orders. The system is easy to use and provide you user friendly environment.**

PROJECT PROFILE

Project Name   Horizon Logistics

Operating System   Microsoft Windows 7/8/10/11

Frontend   PHP, HTML, CSS, JS

Backend   MySQL

Submission Date   30/09/2023

Project Guide   Astha Raval

Developed By   Meet Dobariya & Divyesh
                                Bakhlakhiya

Submitted To   SHREE G.K. & C.K.
                                BOSAMIA College, Jetpur

SYSTEM DEVELOPMENT LIFE CYCLE

➢ The Software Development Life Cycle (SDLC) for a Horizon Logistics application should follow a structured approach as following to ensure that the software is developed, tested, and deployed successfully while meeting the specific needs and requirements of the Logistics web application.

➢ The following is Software Development Life Cycle (SDLC) diagram
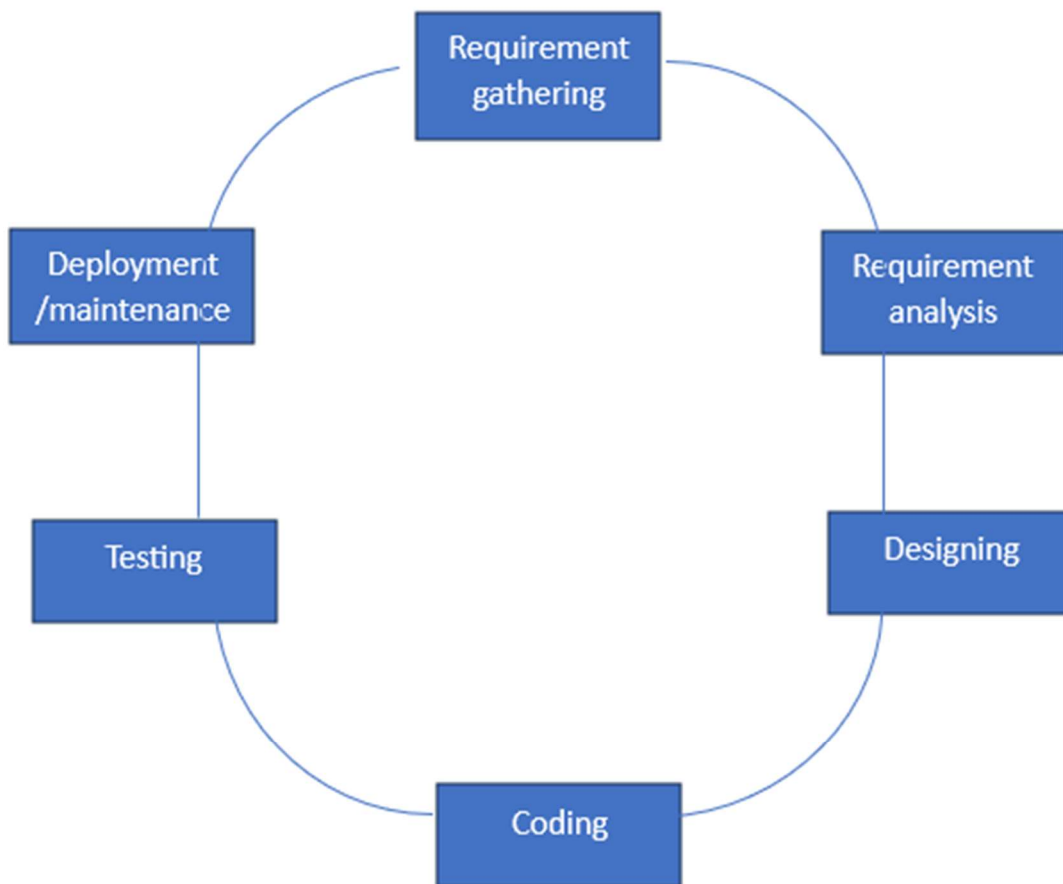

<h1 align="center">REQUIREMENT GATHERING</h1>

Horizon Logistics is web based appllication that provides services to transport goods.

Currently, india has limitations in shipping goods. Horizon logistics can provide services to E-commerce, personal business or personal house-holds.

The following website we checked for reference that also provide logistics services.
1) www.bluedart.com
2) www.aegisindia.com

Goals:-

Horizon logistics a web application should be user friendly and easy to understand & use. it should provide user satisfaction to use customer should easily login or registration in our websites.

Scalability And Flexibility:-

Our web application should be dynamic so it is easy to scalp up web application or change in apllication in future.Make a dynamic web application provides scalability.

✧ The following are the questions that we can ask.

1) What should be different in our web-application than other logistics application?
2) What is your experience from other web application and what you expect from us?
3) Which feauture or functionalities are compulsary according to you?
Which are the limitations of current logistic web application that we can cover in our web application?

Technical Requirements:-

We should have a knowledge of frontend languages like HTML, CSS, JavaScript, and server side languages like PHP also databases like MYSQL to make a web application.

A computer system is must with following softwares:-
1. Vs Code
2. Wamp Server
3. MySql

REQUIREMENT ANALYSIS

Requirement analysis is the process of understanding,documenting and defining the needs and constrains ofa system that is being developed.
It involves gathering information from well known sources,identfying the goals and objectives.
The goal of requirment analysis is to ensure that all necessary aspects of the project are identified and well understood before moving on the next phases.
It determines the requirments are clear,complete unduplicated,consistent,valid and resolving any conflicts. it is one of the most important phases in the life cycle of the system deploment.

✧ We have referenced informations from the following websites:-

1) www.bluedart.com
2) www.aegisindia.com

1)www.bluedart.com

Bluedart is a well established logistics and courier service provider, and their website bluedart.com,reflects their commitement to efficiency and customer satisfaction.
The website has a clean and intuitive design,making it easy for users to navigate and find the information they need.
 It provide real time package tracking as well as easy shipment booking, resourceful tools, mobile responsivness etc.

2)www.aegisindia.com

Aegis logistics is a leading logistics company in india that offers a range of services,including oil,gas and chemical logistics.Their website aegisindia.com serves as their online presence and platform to showcase their services and offrings.
The website delivers relevent content about the company's history,values and acheivments.it also includes imformative sections about the services safety measures and quality standard which instills confidence in potential customers.

v. LogOut

FEASIBILITY STUDY

feasibility study is an analysis or preliminary assesment of a projects viability, conducted to determine if it is practical and achievable.
It examines various factors, economical, operational, legal and scheduling consideration to evaluate whether the project is worth pursuing and if it can be successfully implemented.

Technical Feasibility:-

Technical feasibility refers to the assesment of whether a project can be successfully implemented using existing technology and resources.it determines the need pf a hardware and software.

- Here The Study Of Available Resources.

Software:-
        -Operating System
        -Wamp server
        -Vs Codes
        -Any Browser
        -Frontend:- php
        -Backend:- Mysql

Hardware:-
        -Motherboard
        -Monitor
        -Keyboard
        -Mouse
        -Ram
        -Hard-disk

Economical Feasibility:-

Economical feasibility also known as finacial feasibility is the evalution of wheather a project is financially viable and sustainable.

✧ The Following Are Cost Table According To Technical Feasibility.

Software	Price
Wamp Server	Open Source
Vs Code Editor	Open Source
Browser	Open Source

Hardware	Price
Mother Board	8000-10000
Monitor	5000-8000
Keyboard	500-2000
Mouse	300-800
Ram	2000-5000
Hard disk	3000-9000

Operational Feasibility:-

Operational feasibility is the process to check wheather project can be successfully integrated into the existing organizational structure and operations.
our project can operatable in any device and any operating system.it adapts day to day operations and workflow of logistics processes.

Legal Feasibility:-

Legal feasibility refers to the evalution of wheather a project compiles with the relavent laws,regulations and legal requirments.
Our horizon logistics considered legal aspects, such as transportation regulations,data protection and privacy,domains,international trade and customers etc..

Scheduling feasibility:-

scheduling feasibility determines of wheater a project can be completed within the required time frame.

✧ The following table shows the time frames for our projects.

DATA FLOW DIAGRAM

Data Flow Diagrams are a visuals representation of how data flows within a system. It represents processes, dataflows, databases, sources and destination.
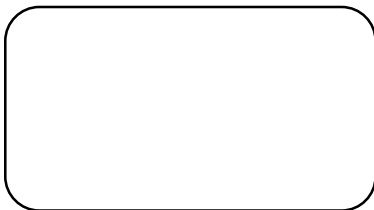

It is used to depict the flow of information within system and external entities.

⇨ Data Flow Diagram Admin & Client Side:

○ Elements Of Data Flow Diagram:-

DATA INFORMATION

Data Information refers to the meaningful informations about data or data structure. raw data has by it self may not hold much significance but when processed, organized and presented in a structured manner, it becomes information that can be used for decision making and problem solving into a particular subject

✧ We define the two stage of data information and required data information are mentioned below:-
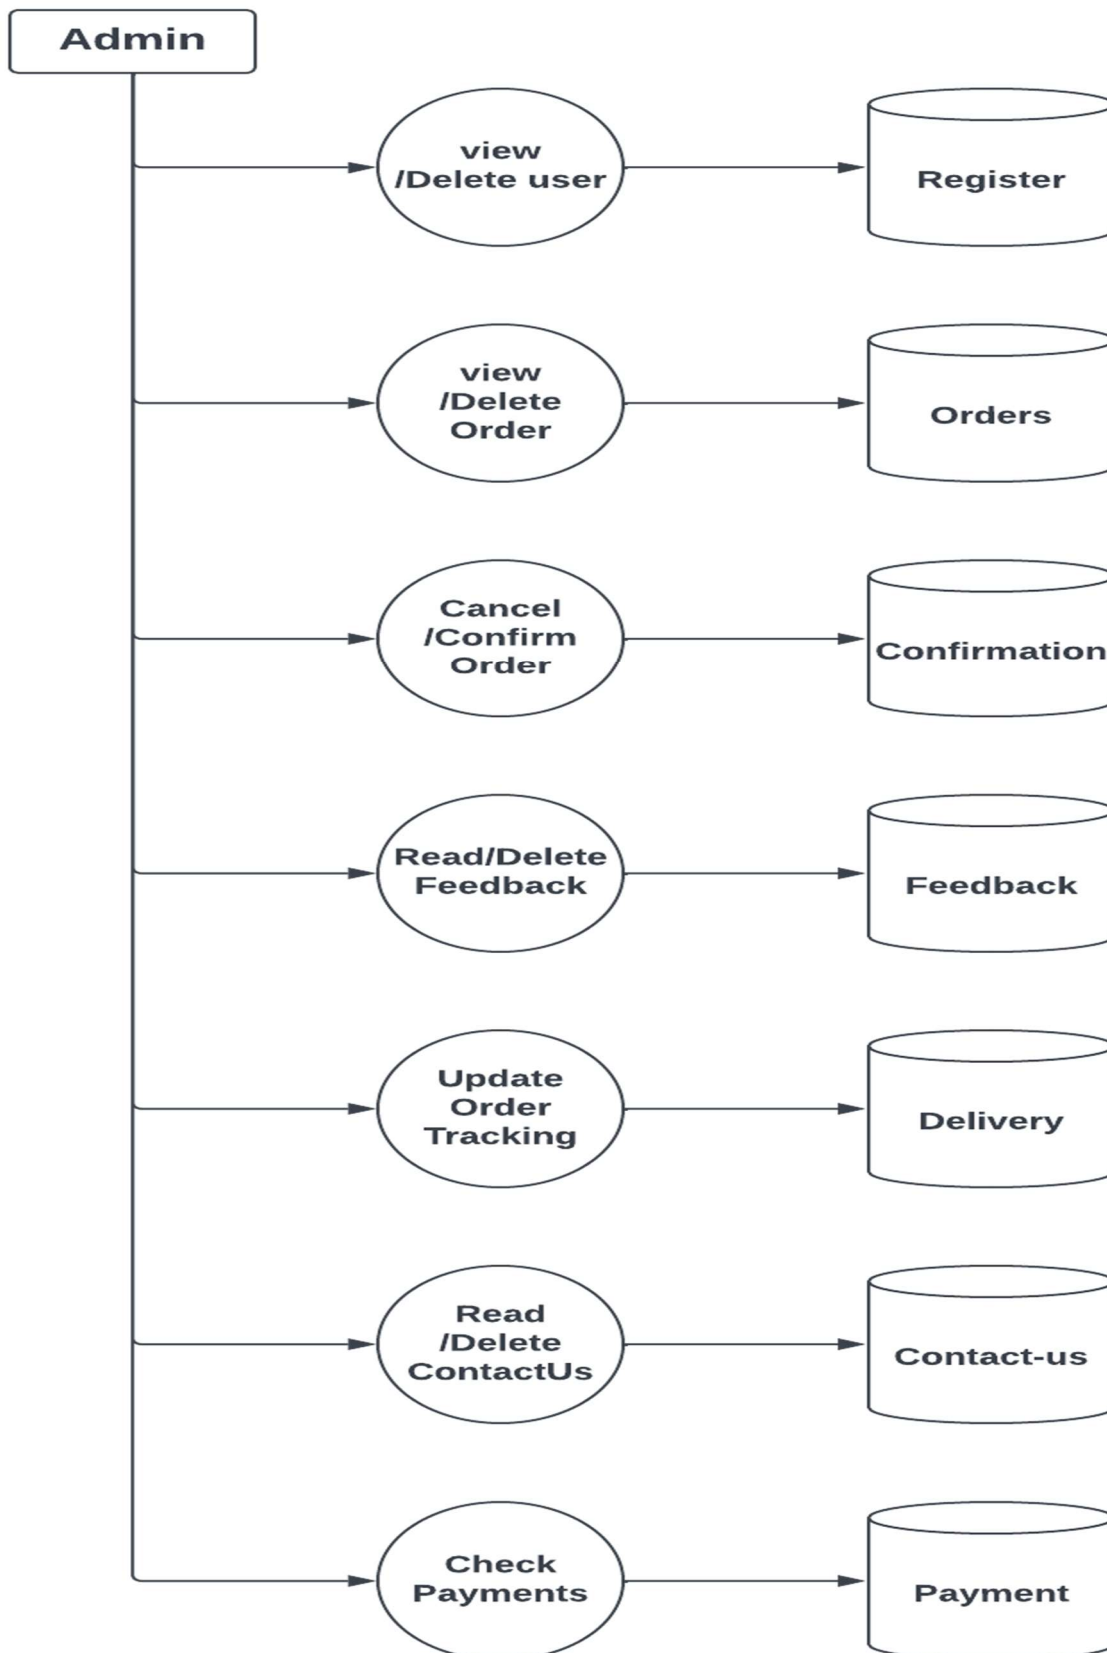

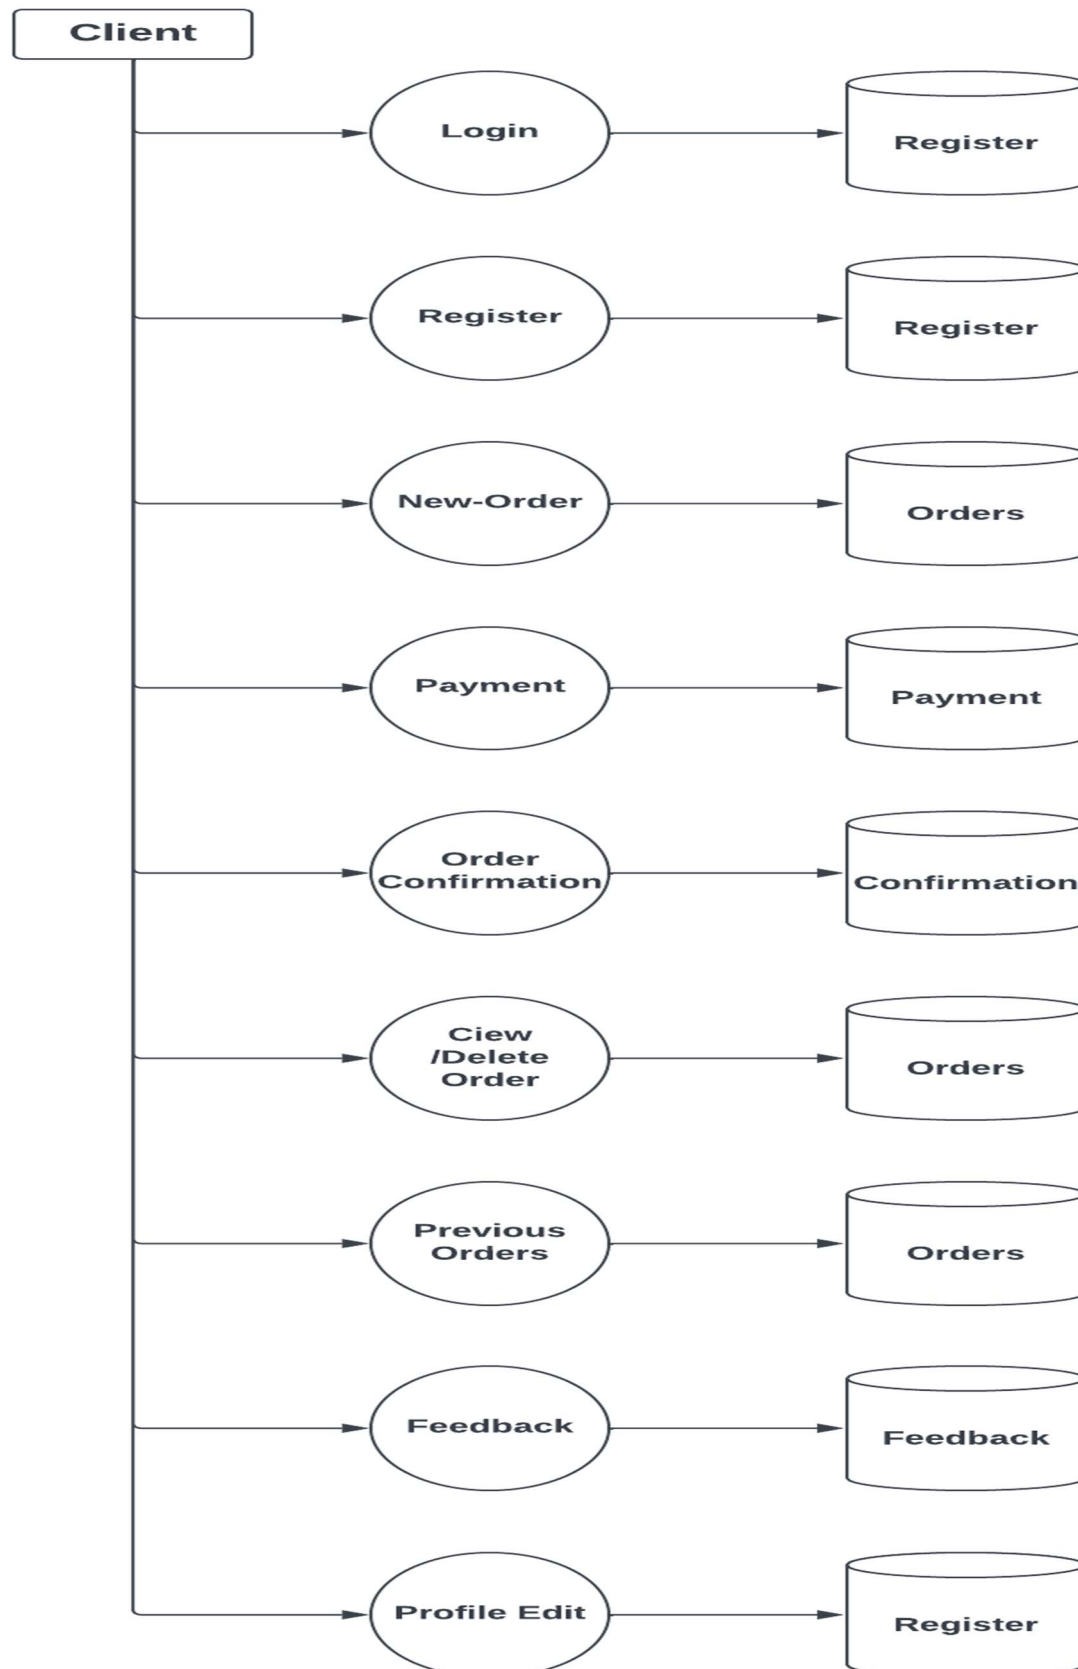

1) User Side:

->Home: It displays the first page of website.
->Login: User can login with username and password if registered
->Sign Up: User details such as first name,last name,user name required.
->User-Profile: User can see and changes its details.
->New Order: User can make new transport order if registered.
->View-Previous order: User can view data about previous order if user is login.
->Preview / Feedback: User can feedback on previous order
->Order Tracking: User can track current order status and can edit or delete it.
->Logout: User logout his/her account.

2)Admin Side:-

->Login: Admin can login with username and password.
->Dashboard: Admin dashboard store the all information such as manage orders, manage users, read/delete order feedback etc.
->Manage orders: Admin can Add/Edit/Delete orders and see all information about orders.
->Manage orders: Admin can Add/Edit/Delete users and access all the information.
->Read/Delete feedback: Admin can read and delete order feedback.
->Change password: Admin can change the password.
->Logout: Admin logout his/her account.

DATA STRUCTURE

A Data structure lists the purpose of all data items and defination of all composite data items in terms of their component data item.

Designing the data structure for a logistics website is a critical aspects of its development. An effective data structure ensures efficient data management, retrive all and processing. Below, We'll outline a simplified data structure for our logistics website.

◆ We have database named **logistics_db** and tables written below.

ERROR AND SOLUTION

- Error 1):- Data Not Displayed On Admin Panel.

  Solution:- Error In Mysqli_query($conn,"SELECT * from hl_register");

- Error 2):-Css Not changing on webpage.

  Solution:-Update the version of css.

- Error 3):-Unknown database in Logistics_db in c:\wamp64\www\HorizonLogistics

  Solution:-changed named it to logistics_db in phpmyadmin.

- Error 4):-undefinrd array['id']

  Solution:-Changed syntax of $_POST['id'];

- Error 5):-Navigation bar not displayed.

  Solution:- <?php include 'include/config.php' ?>
  File Path Not Mentioned In Syntax.

TESTING

System testing is level of the testing that validate the complete and integrated product. It is process of checking functionality and find bugs.

There are two types of testing.

i. Functional Testing
ii. Non-Functional Testing

⇒ Functional Testing:-Functional testing used to determine the actual result is same as expected result.it checks the expected quality of hatstructure and design meet to actual project or not.

⇒ Non Functional Testing:-Determine capabilities of system to load performance, stress, security.it checks the functional behaviour of system.

There Are Two Types Of Testing.

1. White Box Testing
2. Black Box Testing

1. White Box Testing:-It is a internel testing that checks (code) elements such as Loops conditions paths statements.This testing is done by developer.Horizon logistics system is successfully tested according to white box testing. We tested code elements such as loops validations paths conditions statements.

2. Black Box Testing:-it is a externel testing that checks the structure of the system. it is done by tester.it is not possible to do black box testing in our project becuase it is only test by tester.

IMPLEMENTATION

- To implement this project developer must have the knowldege of php html css and java script. These technologies used to program this system.

- Most of developers uses mysql because it is directly connected to php.It is one of the most populer backend database.Mysql provide data objects like tables ,views ,synonames etc.you can also build relations between objects.

- Horizon Logistics is an interactive web application that gives user friendly enviorment to the customers.This project helps us to increse our knowledge and give us many new experience.

LIMITATIONS

Following are the limitations that our project has:

- Can't track live order locations.

- Payment tracking is not possible.

- can't change admin password.

- admin can't chage order and user details.

CONCLUSION

The main purpose of the project is to easily deliver goods and provide quality services to the customers.

Horizon logistics also provides benificial fecilities such as payment management,order tracking,user management and gives you quality services.
